

Main target: implemet CRUD in a system

Instructions

1. Ensure that the mark red become functional.
2. Ensure that it can save data lroperly

Product menu

1. The add product button can add the following details and save data,
2. Ensure item will display base on the column show
3. The select button can be clickable and once click, the user can choose what item can be deleted. And can select item to modify.
4. Enable search bar

Note :Category and finance menu no need to be functional

Add product menu

1. Can add item with the following details as shown in the front-end
2. No need to make the scanner functional . Its just for decoration or char2. For the additional flaws
3. Can save data
4. Buttons are working properly.

User account button

1. Can create account for both admin and cashier
2. Save data
3. If possible can delete user account but not necessarily just optional

Log out button

1. Work properly

In log in site

1. User can log in base on the role. If the user wants to log in as a admin it direct to the admin site same with the cashier .
2. Notify if password incorrect or if there is no account for it

Cashier site

1. Display the cashiers name when log in
2. Can log out (not necessarily save the transaction record but if it can be implemented much better)
3. Display the items when input the barcode of the item at the right side
4. No need to have display in the left since we plan to display the items no., item name, category, qty, price , barcode but not necessarily important
5. Can provide computation for cashing
